

I have chosen to compare my app, which focuses on food reviews, with a larger app like Instagram. Instagram is a broad social platform while my app is more specialized for food lovers. Here I have identified the features and requirements that differentiate my app from Instagram and described them in the form of user stories. I have also categorized the requirements into two groups: must-have and custom requirements.

### **Identified requirements with user stories:**

#### **Must-have requirements (to be competitive with Instagram):**

1. As a user, I want to be able to create an account to access the app's features.

2. As a user, I want to be able to upload posts.

3. As a user, I want to be able to give and receive likes and comments to interact with other users and their reviews.

**1984marek7** Wait are those freckles

4. As a user, I want to be able to follow other users to see their posts

**Self-requirements (the unique features that differentiate my app from Instagram):**

1. As a user, I want to be able to rate dishes and restaurants with a star system (1-5) to provide a quick and clear assessment of my dining experience.
2. As a user, I want to be able to write detailed food reviews along with multiple pictures to give others a better understanding of the food and restaurant.
3. As a user, I want to be able to search for restaurants and dishes based on ratings and reviews to easily find new places to try.
4. As a user, I want to be able to save my favorite recipes or restaurants in a personal list so that I can easily come back to them at a later date.
5. As a user, I want to be able to follow specific reviewers whose taste I trust
